

BRING YOU THE

SUPER CENTIPEDES[®]

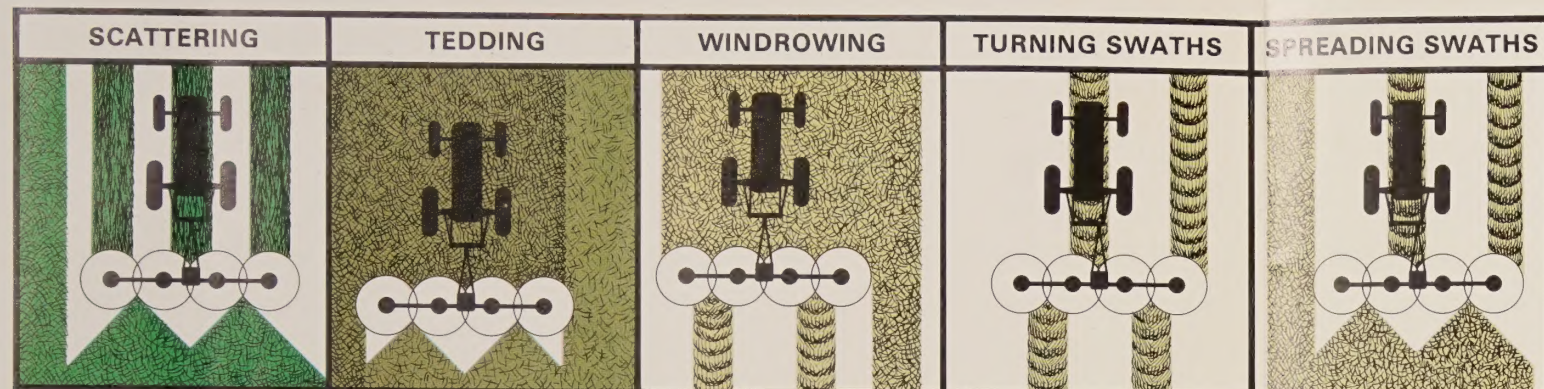

Windrowing for baling with the SUPER KH40

BY

THE BEST

The first really **COMPLETE** HAYMAKERS

FAHR—FIRST in 1960 with the revolutionary 'rotary star' principle . . . now, FIRST AGAIN with a really complete haymaker. The **SUPER CENTIPEDES** give you unequalled ability and versatility.

Below—Tedding with the SUPER KH40

SUPER **CENTIPEDES®**

TWO CENTIPEDES now cover the full range of haymaking activities—and tractor range. Call them the **SUPER KH40** and the **SUPER KH20**. They're markedly different, yet retain the unique performance qualities inherited from those 350,000 earlier CENTIPEDES still giving yeoman service throughout the world. That's experience for you! They're tough, trouble-free . . . and highly efficient.

MODEL KH40 4 ROTARY STARS— WORKING WIDTH 17ft.

The **SUPER KH40** gives you larger diameter 'stars', each with six double tines to give a greater sweep area, completely cleaning the ground. Compared with its predecessors there are now fewer moving parts, and left- and right-hand 'stars' are identical.

That incomparable **CENTIPEDE** 'knuckle' flexibility is still there, to follow every ground contour—and reach into every hollow. Auto-drive Socket Joints replace previous universal joints. Reduction gear for windrowing is now standard. The **SUPER KH40** forms two perfect windrows from 17ft. of cut material.

Wheel positions remain fixed for all working operations . . . and for transport also. No extra wheels are required, nor complicated adjustments. It takes around 30 seconds to attain the transport position.

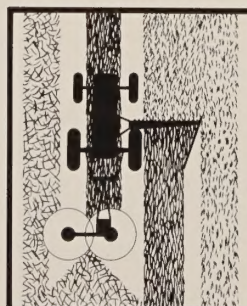

MODEL KH20 2 ROTARY STARS— WORKING WIDTH 11ft.

With the same general features as the **KH40**, the **SUPER KH20** can easily handle two 5ft. or 6ft. swaths.

The **SUPER KH20** spreads 11ft. of cut material. It can form a single perfect windrow on each sweep and can also be fitted with a windrowing basket (as optional extra).

Set in its transport position—which, again, can be attained in a matter of seconds—the **SUPER KH20** can collect cut material close to banks, fences or ditches, spreading inwards for more rapid drying. It can also work directly with a sidemounted mower for mowing and scattering in the one operation.

*Windrowing (with basket) with the **SUPER KH20** and, right, scattering freshly mown swaths. The **SUPER KH20** handles two large green swaths quickly and easily.*

. . . and whilst we're on the subject of haymaking, let's look at the **FAHR TURBO-MOWER**. The outstanding drum mower of today. Phenomenal capacity. Extra quiet. With a **TURBO-MOWER** speeding ahead of your **CENTIPEDE** you've the complete set-up for the most profitable hay harvest you have ever experienced. Smooth, effortless mowing for a start! Fewer working and cutting parts to replace. No knives or sections to sharpen. No blockages or stoppages.

FAHR TURBO-MOWERS have working widths of 4ft. 6in. or 5ft. 4in. Adjustable to four cutting heights. Clean cutting, with no ragged stubbles, leaving compact swaths . . . just ready for that haymaker.

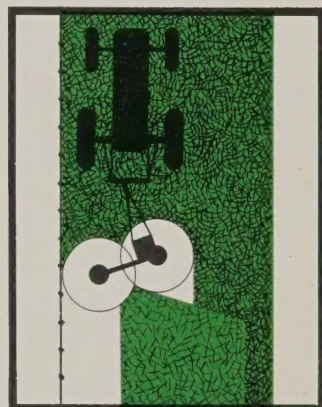

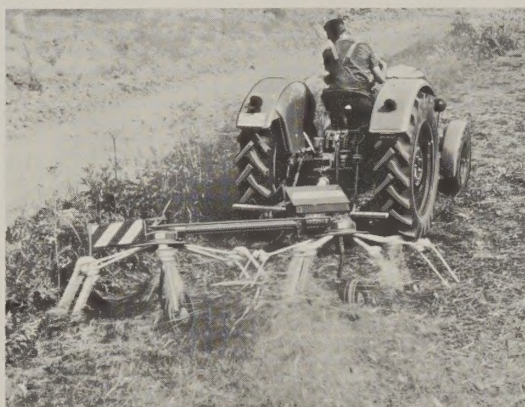

WHAT A PERFECT TEAM FOR TIME-SAVING!

*Above—Spreading windrows with the new **SUPER KH20***

*Right—Set in its transport position the **SUPER KH20** can remove fodder right from the edge of a field, against a fence or bank, turning it inwards for maximum aeration and minimum wastage!*
